The first issue of the 2nd volume of the Journal of Information Systems and Technology Management-RGTSI is as important as the previous number because it represents the continuity of the efforts of implementation of the Journal. The support that we have received from the researchers and collaborators has been fundamental for the success of the Journal. This edition is composed of the following sections: Editorial, Articles, Events and Book Review. In the Articles section six works are presented, being two foreign authors and four Brazilian authors. The first article, *Financial Report in the Internet in Portugal*, presents a study on the tendency of the 250 more profitable Portuguese companies in their use of Internet as away method of popularization of their corporate information. In the second article, *Competitive Intelligence in the Departments of Industrial Maintenance in Brazil*, the authors present research results about the use of the Competitive Intelligence in obtaining technological and competitive advantage. The third article, *Implementation of an Integrated system of Administration in the Federal Institutions of Higher education* approaches the relative challenges to the integration among IT and the organization. In the fourth article, *The picture of the digital exclusion in the Brazilian society*, the authors present reflections on the meaning of the digital exclusion and the importance of its study. The fifth article**,** *Technology of Information: Commodity or Strategic Tool?* discusses concepts and doubts that has motivated great discussions on the role and the value of IT in the organizations started with Nicholas Carr's declarations in 2003. In the sixth article, *Using And-collaboration to improve management education: Three Scenarios* the authors present the results of three experiments in managerial education happened in France and United States based in the technology of "e-collaboration" and the subjects involved in its effective usage. In the Book Review we presented the analysis of the book The Handbook of Information Systems Research of Woszczyncki and Whitman, which approaches and comments the several methodology types in the research in Systems of Information. It is worth to remind our readers and collaborators that RGTSI follows all the practices recommended by Qualis (Brazilian evaluation standards) and also for the main international journals. We thank the authors for the trust and collaboration in submitting their works.
